

# Senior Software Engineer

## About Marketfish

Marketfish is a privately funded Seattle startup poised to disrupt the existing \$4.5B list marketing industry with a cutting edge SaaS platform. With nearly every marketing agency in Seattle as our client, Marketfish is poised for quick, explosive growth and an attractive exit strategy. Come join our team of experienced marketers, entrepreneurs and technologists.

Marketfish is located in the historic Florence Building, right next to the Smith Tower in Pioneer Square.

If you have enterprise web application development experience, enjoy Agile software development, and thrive in a fast-paced entrepreneurial environment, then we invite you to apply. [In other words...](#)

*Get in touch with your inner fish.*

## About the Position

As a senior software development engineer, you will partner with product owners, program managers and fellow developers to deliver world-class web applications an infrastructure capable of supporting millions of transactions per day. In our Agile, small-company environment, you'll be able to apply your skills in Java, MySQL, Linux and Apache to have an immediate impact on our product and our customers. You'll also work across the entire application stack, influencing the web UI, the application layer, transactional databases, message delivery services, backend data processing, and the reporting infrastructure.

## Responsibilities

- Actively participate on an Agile development team to incrementally deliver customer value.
- Implement major components and/or services across multiple application tiers.
- Provide leadership in web application UI development
- Contribute at a senior-level to system architecture and design.
- Advocate for and apply best practices such as TDD, continuous integration, design patterns and refactoring to ensure code quality.

## Requirements

- B.S. in Computer Science or a related technical major, or equivalent experience
- 7+ years of enterprise-scale commercial web application development in a Java/J2EE environment
- Development expertise in at least several of the following:

- MVC UI frameworks such as Wicket, Tapestry, Struts or Spring MVC
- Hibernate, JPA or other ORM frameworks
- Javascript, CSS, HTML, AJAX methodologies
- SQL / relational database development
- Search engine technologies such as Lucene and Solr
- Web services
- Server-side development techniques
- Demonstrated design skills and a passion for code quality
- Prior Agile (Scrum, XP, ...) development experience a plus
- No relocation. No H1-B.
