

Software Test Lead

About You

As an experienced software tester, you partner with product owners, program managers and software developers to deliver world-class web applications. You are a passionate advocate for automated testing, continuous integration, and other early detection methods ensuring that you release quality software each development iteration. You “get” scrum and understand that requirements become clearer when the customer can see the product coming together. You are comfortable working across the entire web application stack, from the web UI, through the application layer, down to transactional databases, message delivery services, and backend data processing.

About Us

We are a well funded Seattle startup poised to disrupt the existing \$4.5B list marketing industry with a cutting edge SaaS platform. With nearly every marketing agency in Seattle as our client, we are poised for quick, explosive growth and need a team who can keep up. Come join our team of experienced marketers, entrepreneurs and technologists.

We are located downtown in Pioneer Square.

If you have enterprise web application development experience, enjoy agile software development, and thrive in a fast-paced entrepreneurial environment, then we invite you to apply.

Responsibilities

- Actively participate on an agile development team to incrementally deliver customer value
- Verify the quality of software releases
- Work with business owners to ensure we deliver what they want
- Own the continuous integration testing environment
- Drive the implementation and adoption of automated testing and reporting
- Participate in triage process, acting as a customer advocate
- Hire and manage a top-quality test team as we grow
- Contribute at a senior-level to system quality and testability

Requirements

- B.S. in Computer Science or a related technical major, or equivalent experience
- 3+ years web application testing
- Prior test automation experience using Java/J2EE or C#/.Net required
- Testing expertise in at least several of the following:
 - MVC UI frameworks (e.g. Wicket, Spring, WCF, Rails, Django)
 - Javascript, CSS, HTML, AJAX methodologies
 - SQL databases

- Web services testing
- Demonstrated eye for design and a passion for product quality
- Prior agile (scrum, XP, etc) experience a plus
- No relocation. No H1-B.
